

Automotive Mechanical Fuel Pump

Mechanical fuel pump designed for automotive applications. It features a robust metal construction with a mounting flange for secure attachment to the engine block and includes inlet and outlet ports for fuel line connections.

Product Overview

Mechanical Automotive Fuel Pump

This mechanical fuel pump is engineered specifically for automotive applications, offering a reliable solution for fuel delivery. Featuring a robust metal construction, it is designed for durability and long-term performance under engine operating conditions. The unit includes a secure mounting flange for stable attachment to the engine block, making it an essential component for classic car restoration and automotive repair projects.

Technical Specifications

Construction Material	Robust Metal
Mounting Style	Flange Mount
Port Configuration	Inlet Port, Outlet Port

Application

Primary Applications

- Classic Car Restoration
- Automotive Repair
- Engine Maintenance
