

Automotive Needle Roller Bearing

This needle roller bearing is designed for use in auto repair. Its stable quality makes it suitable for various vehicle models.

Product Overview

High-Performance Automotive Needle Bearing

This needle roller bearing is engineered for demanding automotive applications, including transmissions and gearboxes. Constructed with high-precision components, it is designed to deliver robust load capacity and minimal friction during operation. Each unit is manufactured to meet rigorous international and domestic quality standards, ensuring reliable performance in rotating assemblies.

Dimensions

Bore Diameter	35 mm
Outer Diameter	60.2 mm
Width	18.2 mm

Identification

OE Reference Number	308-203
---------------------	---------

Manufacturing Standards

Standards Compliance	International Standards, Domestic Manufacturing Standards
Customization	Yes
