

# Automotive Plastic Component

This is a custom-designed auto part constructed from durable plastic, ideal for automotive use. It can serve as a protective element or an aesthetic upgrade in vehicles.

## ADDITIONAL IMAGES

## Overview

### Customized Automotive Plastic Solutions

These customized plastic components are specifically engineered for demanding automotive applications, offering a precise fit and durable performance. Designed for both protective and aesthetic roles, the parts feature integrated mounting points and clear instructional markings for ease of maintenance. The high-quality material ensures long-term resistance to wear and tear in various vehicle environments.

## Technical Specifications

### Installation Torque

**88 IN-LBS**

Torque Bolts

**11 N-M**

Torque Bolts

### Material Properties

Wear-Resistant, Durable Plastic, Corrosion-Resistant, High Reliability

## Application & Use

### Primary Applications

- Engine Service Components
- Bumpers and Exterior Trim
- Interior Panels
- Protective Covers
- Aesthetic Enhancements

## Fastening System

### Fastener Characteristics

Multiple Sizes • Secure Hold • Multi-style Assortment

### Mounting Features

Multiple integrated mounting points for precise fitment

## Maintenance

### Service Instructions

Component includes embossed text for engine service removal instructions
