

Automotive Radiator Cooling Fan Blade

This radiator fan blade is engineered for optimal performance and longevity in automotive cooling systems. The blades are constructed from durable, lightweight plastic material to maximize airflow and minimize engine load.

Product Overview

High-Efficiency Radiator Cooling Fan

This six-blade radiator cooling fan is engineered to provide superior thermal management for automotive engines. Its lightweight, durable plastic construction minimizes engine load while maximizing airflow efficiency. Designed with a robust central hub and versatile mounting points, it ensures a secure, reliable fit for demanding cooling environments.

Technical Specifications

Blade Count	6
Material Composition	Durable lightweight plastic
Key Features	Optimized Airflow, High Durability, Low Load, Robust Hub Design

Installation Details

Mounting Type	Multi-point central hub attachment
