

Automotive Rubber Diaphragm

This rubber diaphragm provides a flexible and airtight seal for pressure and fluid control in automotive applications. It is constructed from high-quality rubber compounds, exhibiting excellent resistance to fuels, oils, and temperature variations.

Product Overview

Automotive Rubber Diaphragms

These precision-engineered air brake diaphragms are manufactured using a high-performance rubber blend reinforced with nylon fabric. Designed to withstand the most demanding operational environments, they ensure reliable pressure and fluid control in critical automotive systems. Our focus on independent research and development allows for highly customizable solutions to meet diverse industrial requirements.

Technical Specifications

Material Characteristics

- Oil resistant
- Fuel resistant
- Temperature resistant
- High flexibility
- Airtight seal

Reinforcement	Nylon fabric
---------------	--------------

Model Identification	T-9, 01
----------------------	---------

Performance Metrics

Annual Production Capacity

8000000 pieces

Annual Output

Applications

Primary Applications

- Air brake systems
- Fuel pumps
- Pressure regulators
- Vacuum systems
