

Automotive Safety Brake Valve

This valve is a critical component in automotive braking systems. It is available in configurations to fit both right-hand and left-hand drive vehicles.

Product Overview

Automotive Safety Brake Valve

This automotive safety brake valve serves as a critical component in vehicle braking systems, designed to ensure safety and reliable fluid management. Available in specialized configurations for both left-hand and right-hand drive models, it caters to diverse international automotive standards. The unit is constructed from high-durability metal and is engineered to support seamless hydraulic integration for specific vehicle applications.

Technical Details

Supported Drive Types	Left-hand Drive, Right-hand Drive
Construction Material	Durable metal
Function	Safety brake fluid valve for hydraulic braking systems

Model Compatibility

Compatible Vehicle Models

- Toyota Hilux
