

# Automotive Shock Absorber

This shock absorber is designed for a wide range of vehicle models. It features seamless steel cylinder and aero hydraulic oil for lubrication and stability.

## Product Overview

### High-Performance Shock Absorbers

These shock absorbers are engineered for optimal vehicle control and ride comfort, featuring a twin-tube design with multi-lip oil seals. The seamless steel cylinder construction and nitrogen gas charging work together to minimize foaming and enhance damping consistency. Designed for durability and stability, they are treated with electrospray paint to ensure high corrosion resistance under various driving conditions.

## Technical Specifications

### Warranty Coverage

**80000 Km**

Minimum Warranty Distance

### Damping Technology

Hydraulic, Gas-filled, Twin-tube design

## Construction Materials

### Material Components

- Seamless steel cylinder
- Aero hydraulic oil
- NOK or RFX oil seal
- Chromed piston rod

## Key Features

### Performance Advantages

20% longer life • Anti-cline technology • Corrosion resistant • Micro-polished piston rod
