

Automotive Shock Absorber for Vibration Damping

This shock absorber is designed for vibration damping in automotive applications. It is manufactured from high-strength steel and includes mounting hardware.

Product Overview

Precision Automotive Damping

This automotive shock absorber is engineered to provide superior vibration damping for diverse suspension systems. Crafted from high-strength steel, the assembly ensures long-term durability and reliability under demanding road conditions. The kit includes all necessary brackets, mounts, and bushings, making it a robust solution for maintenance and automotive performance upgrades.

Technical Details

Included Components

- Mounting Brackets
- Mounts
- Bushings

Durability Profile

High-Strength • Heavy-Duty • Precision-Engineered

Material

High-strength steel

Application Compatibility

Automotive, Vibration Damping, Suspension Systems
