

# Automotive Starter Motor

This high-performance starter motor is designed for reliable engine starting. It features a robust construction with precision-engineered gears for efficient power transfer and long-lasting durability.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Automotive Starter Motor

This starter motor is engineered to convert battery electrical energy into the mechanical energy required to drive the engine flywheel for reliable ignition. Designed for durability, the unit features a reduction gear system that ensures efficient power delivery under demanding conditions. It is built to meet or exceed OEM specifications, providing long-lasting performance and consistent starting power for a variety of automotive applications.

## Technical Specifications

Net Weight	10.5 Kg
Power Output	2600 W
Voltage	24 V
Construction Material	Steel

## Features

### Primary Features

- Reduction gear system for enhanced torque
- Engineered for consistent OEM-level performance
- Robust solenoid and gear construction
- Designed for reliability in demanding conditions
