

# Automotive Steering Drag Link Assembly

This steering drag link assembly is designed for automotive steering systems. It transmits motion from the steering box to the steering linkage, enabling the vehicle to turn.

## Product Overview

### Automotive Steering Drag Link Assembly

This steering drag link assembly is an essential component designed to transmit motion from the steering box to the linkage system, ensuring precise vehicle control. Constructed from high-strength steel, the unit provides the necessary durability to handle constant steering stresses. With precision-engineered ball joints and a corrosion-resistant finish, it offers a reliable, long-lasting solution for automotive steering systems.

## Technical Details

### Key Features

- Precision-engineered ball joints
- High-strength steel construction
- Corrosion-resistant coating
- Direct fit replacement

Construction Material	High-strength steel
Finish	Black corrosion-resistant finish
Compatibility	Automotive Steering Systems, Direct Fit, Steering Linkage

## Performance

### Operational Benefits

**1 Reduced**

Articulation Friction

**1 Optimized**

Steering Accuracy
