

Automotive Steering Gear Housing

Steering gear housing designed for automotive steering systems. Constructed from high-strength cast metal, the housing ensures optimal protection and alignment of internal components, contributing to smooth and responsive steering performance.

Product Overview

Precision Automotive Steering Gear Housing

This high-strength steering gear housing is engineered to serve as a durable and precise enclosure for critical automotive steering mechanisms. Constructed from high-quality aluminum alloy using advanced die-casting processes, it ensures optimal protection and alignment for internal components. Designed with integrated mounting points and ports, this housing is compatible with both hydraulic and electronic steering systems for reliable, responsive performance.

Manufacturing & Quality

Material	Aluminum Alloy
Quality Certifications	ISO9001:2000, ISO9000:1998
Manufacturing Method	High-pressure die-casting

Application Compatibility

Suitable Industries

- Automotive Manufacturing
- Motorcycle Manufacturing
- Hydraulic Control Systems
- Aircraft Manufacturing
- Food Machinery
- Textile Machinery
