

Automotive Steering Gearbox

This steering gearbox is a crucial component in a vehicle's steering system. It is designed to provide precise and reliable steering control.

Overview

High-Performance Steering Control

This automotive steering gearbox is a critical component designed to provide precise and reliable steering control for modern vehicles. Constructed with a durable housing and a protective coating, it is engineered to withstand demanding road conditions while ensuring smooth operation. The unit features a splined shaft for a secure connection to the steering column and integrated mounting points for stable chassis attachment.

Technical Features

Component Type	Steering Gearbox
Connection Interface	Splined shaft for steering column connection
Mounting System	Integrated chassis mounting points

Material & Build

Key Benefits

Precise Control • Reliable Steering • Durable Housing • Corrosion Resistant

Housing Construction	Durable material with protective coating
----------------------	--

Application

Intended Application

- Automotive steering systems
- Vehicle chassis integration
- Steering column torque transfer
