

Automotive Steering Tie Rod

This tie rod connects the steering linkage to the steering knuckle, enabling wheel turning. It features a durable steel construction, adjustable end with grease fitting, and a ball joint for smooth articulation.

Product Overview

Professional Steering Component

This automotive steering tie rod is a critical component designed to ensure precise vehicle control and steering responsiveness. It effectively connects the steering linkage to the steering knuckle, providing the necessary articulation for smooth wheel movement. Engineered from high-strength steel and finished with a corrosion-resistant coating, this part is built for durability and long-term performance under demanding road conditions.

Technical Specifications

Material	Durable Steel
Finish	Corrosion-resistant coating

Features

Key Features

- Adjustable end for precise alignment
- Integrated grease fitting for maintenance
- Ball joint for smooth articulation
- Heavy-duty steel construction

Maintenance

Care Requirements	Regular inspection required, Grease lubrication
