Product Overview

Precision-Engineered Sunroof Guide Rail

This automotive sunroof guide rail is a high-performance component designed for smooth and reliable operation of sunroof systems. Manufactured from high-grade aluminum, it offers excellent corrosion resistance and structural integrity for long-lasting durability in diverse weather conditions. The design features precise machining, pre-drilled mounting holes, and integrated channels to ensure optimal alignment and seamless integration with existing sunroof assemblies.

Manufacturing Process

Production Workflow

- Extrusion molding
- Aging process
- Precision sawing to length
- Machining (fine sawing, punching, chamfering, CNC punching)
- Anodizing

Technical Features

Design Highlights

Lightweight • Pre-drilled Mounting Holes • Integrated Channels • Precision Machined

Material & Finish

High-grade Aluminum, Anodized Finish, Corrosion Resistant

Application

Target Use

Automotive small sunroof systems, suitable for manufacturers and aftermarket service providers.
