

Automotive Suspension Bushing

This suspension bushing is designed to isolate vibration and reduce noise in automotive suspension systems. It is constructed from durable rubber to ensure long-lasting performance and maintain ride comfort and handling stability.

Product Overview

Automotive Suspension Bushing

This high-quality suspension bush is engineered to isolate vibration and minimize noise within automotive suspension systems. Designed for durability, the component effectively withstands both axial and radial mechanical forces, ensuring long-lasting performance under varied driving conditions. It is an essential replacement part for maintaining vehicle handling stability, ride comfort, and overall suspension integrity.

Technical Specifications

Key Functional Features

- Vibration isolation
- Noise reduction
- High mechanical stress resistance
- Environmental wear resistance

Material Composition

High-durability rubber

Identification & Compatibility

Part Identification Codes

160301, 11 800 396.935, MRG-6
