

# Automotive Wheel Balancer with Digital Display

This wheel balancer is a precision instrument designed for accurately balancing automotive wheels. It features a digital display for easy reading of measurements and a protective hood for safety during operation.

## Product Overview

### Professional Digital Wheel Balancer

This high-precision automotive wheel balancer is engineered for professional service environments to ensure optimal tire performance. Equipped with a clear digital display and hood-actuated auto-start, the machine provides accurate measurements for both static and dynamic imbalances. It features a robust, durable frame designed to deliver consistent results, helping technicians reduce tire wear and improve vehicle ride quality through precise weight placement.

## Operational Features

### Key Functionalities

- OPT balance function
- Multi-balancing choices for diverse wheel structures
- Multiple positioning methods
- Self-calibration program
- Ounce/gram conversion
- Hood-Actuated Auto-start

### Measurement Accuracy

Yes

## Customization

### Available Colors

Optional colors available
