

Automotive Wiring Harness Connector

This automotive wiring harness connector is designed for reliable electrical connections in vehicle systems. It features multiple insulated wires bundled together and terminated with a robust connector housing.

Product Overview

Reliable Automotive Connectivity

This ten-hole wiring harness connector is engineered for secure and efficient signal transmission in automotive and industrial electrical systems. Designed with robust construction to withstand environmental factors, it ensures long-lasting performance for complex wiring management. The unit features a durable housing and pre-terminated insulated wires, making it an ideal solution for reliable connectivity in vehicle electronic components.

Technical Specifications

Key Features

- Robust plastic housing
- Insulated wiring harness
- Environmental resistance
- Secure locking mechanism

Pin Count	10 pins
Connector Type	Wiring Harness Connector
Applications	Automotive, Industrial, Electrical Systems
