

Automotive Wiring Harness Connector

This connector is designed for use in automotive electronic systems, providing a secure and reliable connection. The harness includes multiple wires of different colors for easy identification and connection to the appropriate circuits.

Product Overview

Automotive Wiring Harness Connector

This automotive wiring harness connector is engineered for reliable connectivity in complex electronic systems. Featuring a multi-wire configuration with distinct color coding, it ensures efficient and error-free installation for automotive circuits. Designed for durability and performance, this component is an ideal solution for aftermarket automotive service and electronic system repairs.

Technical Specifications

Key Features

- Color-coded wiring for easy identification
- Secure connection terminals
- Designed for automotive electronic systems
- Reliable harness construction

Included Components

Electric Circuit Connectors • Connection Terminals • Connection Cables

Component Type	Automotive Electric Circuit Connector
Applications	Automotive Electronics, Circuit Wiring, Aftermarket Service, Cable Connectivity
