

Auxiliary Engine Piston

High-performance auxiliary engine piston designed for demanding industrial applications. This piston features multiple compression rings for optimal sealing and reduced blow-by.

Product Overview

High-Performance Auxiliary Engine Piston

This auxiliary engine piston is precision-engineered to meet the demands of industrial applications. Constructed from durable materials, it is designed to withstand high temperatures and pressures, ensuring reliable and efficient engine operation. The design features multiple compression rings for optimal sealing and reduced blow-by, while the piston pin bore is accurately machined for smooth connecting rod articulation.

Technical Features

Design Features

- Multiple compression rings for sealing
- Reduced blow-by design
- Precision-machined piston pin bore
- High-temperature resistant construction

Application	Auxiliary Engine, Industrial
