

Axial Fan for Apparel & Textile Machinery

Axial fan designed for cooling applications in machinery and industrial settings. It features a square frame with mounting holes and fan blades optimized for efficient airflow.

Product Overview

High-Efficiency Axial Cooling Solution

This axial fan is precision-engineered for cooling applications within demanding industrial settings, specifically optimized for apparel and textile machinery. Featuring a robust square frame design with integrated mounting holes, it ensures secure and stable installation in high-vibration environments. The fan blades are crafted from durable materials and aerodynamically optimized to provide reliable thermal management while maintaining quiet operation.

Technical Specifications

Frame Design	Square frame
Mounting	Pre-drilled mounting holes
Primary Application	Textile Machinery, Apparel Machinery, Industrial Cooling

Performance Features

Key Performance Attributes

- Optimized airflow efficiency
- Durable material construction
- Quiet operational profile
- Reliable thermal management
