

Axial Fan for Component Cooling

Axial fan designed for cooling electronic components and industrial equipment. It features a robust frame and impeller for reliable operation.

Product Overview

High-Performance Axial Cooling Fan

This axial fan is engineered specifically for the reliable cooling of electronic components and industrial equipment. Featuring a robust frame and impeller design, it is built to withstand demanding operational environments while maintaining efficient airflow and low noise levels. It serves as an ideal solution for cooling power supplies, enclosures, and various ventilation systems.

Key Features

Performance Highlights

0 High

Airflow Efficiency

0 Low

Noise Level

Suitable Applications

Power Supplies, Electronic Enclosures, Industrial Ventilation, Component Cooling

Construction

Design Features

- Robust frame construction
- High-performance impeller design
- Suitable for demanding environments
