

Axial Fan for Refrigeration

High-efficiency axial fan designed for refrigeration and ventilation applications. It features optimized blade geometry for maximum airflow and minimal noise.

Product Overview

Industrial Refrigeration Performance

This high-efficiency axial fan is specifically engineered for professional refrigeration and ventilation applications. It features robust construction and optimized blade geometry that delivers maximum airflow while maintaining minimal noise levels. Designed for reliability, this unit is ideal for integration into condensers, evaporators, and demanding industrial cooling systems.

Technical Specifications

Performance Metrics

1 Level

Airflow Optimization

Features

- Optimized blade geometry
- Robust industrial-grade construction
- Integrated protective guard
- Low-noise operation profile

Suitable Applications

Condensers, Evaporators, Industrial Cooling, General Ventilation

Safety Equipment

Yes
