

Axial Flow Fan for Refrigeration

This axial fan is designed for refrigeration and ventilation applications. Its aerodynamically optimized blades maximize airflow while reducing noise.

Product Overview

High-Efficiency Axial Ventilation

This axial flow fan is engineered specifically for demanding refrigeration and ventilation applications, including use in condensers and evaporators. It features aerodynamically optimized blades that maximize airflow while simultaneously minimizing noise output. Built with robust, durable materials, this fan is designed for longevity in harsh environments and comes equipped with a safety guard for operational reliability.

Technical Specifications

Key Features

- Aerodynamically optimized blades
- Low noise operation
- High airflow capacity
- Includes protective safety guard
- Durable industrial-grade construction

Suitable Applications

Refrigeration, Ventilation, Condensers, Evaporators, Heat Exchange Equipment
