

# Axial Flow Fan for Refrigeration

High-efficiency axial fan designed for refrigeration and ventilation applications. The fan blades are aerodynamically optimized for maximum airflow and minimal noise.

## Product Overview

### High-Efficiency Ventilation

This axial flow fan is engineered for demanding refrigeration and ventilation applications, offering robust performance in industrial and commercial settings. Its aerodynamically optimized blade design ensures maximum airflow efficiency while keeping operational noise to a minimum. Built for durability, the unit features a sturdy square mounting plate and a protective safety grille to provide reliable air circulation and heat extraction.

## Design and Construction

Mounting Type	Square mounting plate
Safety Features	Protective grille, Aerodynamically optimized

## Application

### Primary Applications

- Commercial refrigeration
- Industrial ventilation
- Heat extraction
