

# Axial Thrust Ball Bearing

Precision thrust ball bearing designed for axial load support. It features hardened steel races and quality ball bearings for smooth operation and long life.

## Product Overview

### Precision Axial Thrust Ball Bearing

This high-performance axial thrust ball bearing is engineered for professional applications requiring reliable axial load support. Built with hardened steel races and high-quality ball bearings, the unit ensures smooth operation and an extended service life under demanding conditions. It serves as an essential component for diverse industrial equipment, automotive systems, and heavy machinery.

## Technical Specifications

### Performance Features

- Optimized for axial thrust loads
- Hardened races for durability
- Smooth rotational operation
- Extended service lifespan

<b>Supported Load Type</b>	Axial thrust
<b>Material Composition</b>	Hardened Steel Races, High-Quality Steel Balls

## Application Suitability

### Recommended Industries

Industrial Machinery • Automotive • Heavy Equipment
