

Backhoe Loader

This backhoe loader is a versatile earthmoving machine designed for digging and loading. Its key features include a robust chassis, powerful engine, and hydraulic system for efficient operation.

ADDITIONAL IMAGES

Overview

High-Performance Backhoe Loader

This versatile backhoe loader is engineered for maximum efficiency in construction and earthmoving applications. It features a powerful, fuel-efficient inline direct-injection engine paired with a robust power shuttle transmission for superior torque and responsiveness. Designed with operator comfort and safety in mind, the machine includes an ergonomic cabin with excellent all-around visibility, ROPS/FOPS structures, and intuitive pilot joystick controls.

Engine & Powertrain

Engine Type	Inline direct-injection four-stroke
Drive System	4WD (Four-Wheel Drive)
Transmission	Power shuttle, 2-speed forward, 2-speed reverse, Torque converter

Operational Features

Key Capabilities

- Quick hitch system for rapid attachment changes
- Hydraulic side shift for working in crowded urban areas
- Telescopic boom configuration for extended reach and height
- Pilot joystick controls for multi-function operation

Stabilizer Designs

Design	Benefit
A Shape	Strong working stability and center-position excavating
H Shape	Wide working range, high efficiency, and excavating along walls

Operator Environment

Cabin Comfort & Safety

ROPS/FOPS Structure • Air-suspension seat • Excellent visibility • Ergonomic layout • Optional seat warmer • Optional air conditioner
