

Ball Peen Hammer with Double Plastic-Coated Handle

This ball peen hammer is designed for shaping metal and closing rivets. It features a hardened steel head and a double plastic-coated handle for enhanced grip.

Product Overview

Professional Ball Peen Hammer

This ball peen hammer features a hardened steel head designed for heavy-duty metalworking, rivet closing, and striking punches. The handle is equipped with a double plastic coating, which provides superior shock absorption and an ergonomic grip to minimize user fatigue during extended operation. It is a reliable tool engineered for high-performance applications in automotive, construction, and metalworking environments.

Key Features

Key Features

- Hardened steel head for maximum durability
- Double plastic-coated handle for enhanced grip
- Shock-absorbing handle design
- Ergonomic construction to reduce fatigue

Applications

Primary Applications

Metalworking, Automotive Repair, Construction, Rivet Closing, Punch Striking
