

Ball Peen Hammer with Wooden Handle

This ball peen hammer, also known as a machinist's hammer, is designed with a hardened steel ball-shaped peen for shaping metal and setting rivets. It features a wooden handle for comfortable grip and shock absorption.

Product Overview

Professional Machinist's Hammer

This ball peen hammer is a versatile tool designed for precision metalworking and general-purpose applications. Featuring a drop-forged steel head for maximum durability, it includes a hardened ball-shaped peen specifically engineered for shaping metal, setting rivets, and closing pins. The classic wooden handle provides a comfortable grip and effective shock absorption for extended use.

Technical Specifications

Head Material	Drop-forged steel
Handle Material	Wood

Key Features

Design Benefits

- Hardened steel ball peen for shaping and riveting
- Drop-forged head for superior strength
- Shock-absorbing wooden handle
- Ergonomic grip for comfortable handling

Ideal Applications	Metalworking, Automotive, Riveting, General Purpose
