

Ball Transfer Unit

This ball transfer unit is designed for machinery and industrial applications requiring smooth, omnidirectional movement. It is suitable for use in conveyor systems and material handling equipment.

Product Overview

Industrial Ball Transfer Unit

This high-quality ball transfer unit is engineered for smooth, omnidirectional movement in industrial material handling systems. Featuring a robust housing with a protective corrosion-resistant coating, the unit supports heavy loads while allowing for easy repositioning in conveyor layouts. Its durable design ensures long-lasting performance in machinery and diverse mechanical applications.

Technical Specifications

Construction Features

- Omnidirectional movement capability
- Durable cup-shaped housing
- Corrosion-resistant gold zinc plating
- Internal bearing support system

Surface Coating

Gold-colored • Corrosion-resistant

Primary Applications

Conveyor Systems, Material Handling, Machinery Components, Industrial Logistics
