

Bank Debit Card

Debit card enables access to banking services and transactions. The card features a green background and a holographic security feature.

Product Overview

Advanced Infrared Data Gathering Technology

The CJH-02D Infrared Data Gathering Machine utilizes high-speed, contactless IrDA communication to ensure reliable data transfer. Designed for versatility, it supports communication speeds of up to 115.2Kbps with upper computers and features a robust one-meter communication range. By eliminating physical contact, this device prevents data errors caused by wear and tear, offering a safe and dependable solution for card reading and writing environments.

Technical Specifications

Communication Speed

57.6 Kbps

IC Card Reading

115.2 Kbps

Upper Computer

Communication Distance

1 meter

CPU Architecture

RISC order CPU (ATMEL)

Storage Capacity

Memory Size

2M FLASHROM

Record Storage

80000

Blacklist Storage

4000

Features

Key Advantages

- Contactless infrared communication
- Eliminates data errors from bad contact
- No mechanical wear from insertion/drawing
- High-speed integrated IrDA
