

Bar Peeling Machine for Metal Processing

This bar peeling machine is designed for metal processing applications. It is used for straightening wire, bar, and steel materials.

Product Overview

Professional Metal Processing Solutions

This bar peeling machine is a specialized piece of equipment designed for high-precision metal processing. It is engineered to deliver world-class results in steel bar peeling, centerless machining, and straightening. Based on proven international designs with innovative improvements, this equipment is trusted by professional clients for its quality and technological performance.

Main Capabilities

- Steel bar peeling
- Centerless machining
- High-precision straightening
- Calendering

Model Selection

Centerless Lathe Models

BP-80, BP-40, BP-150, WC-250

Straightening Calender Models

JP-15, JP-50, JP-80, JP-150

Quality & Standards

Technology Level

World Class Results • Proven Innovation • High-Precision

Design Basis

Improved innovation based on proven foreign models
