

Base Plate Air Compressor Pump

This base plate air compressor pump is designed for industrial applications requiring compressed air. It features a robust construction with a cast metal base, cylinder, cooling fins, a flywheel, and an intake manifold.

Overview

Industrial Air Compressor Pump

This base plate air compressor pump is engineered for demanding industrial environments where reliable compressed air is essential. Featuring a robust cast metal construction, the unit is designed for durability and long-lasting performance. Integrated cooling fins ensure efficient heat dissipation, while the included flywheel promotes smooth, consistent operation.

Construction & Design

Material	Cast Metal
Cooling Mechanism	Integrated cooling fins

Installation & Compatibility

Compatible Components

- Air tank
- Motor
- Intake manifold

Mounting	Base plate mount
----------	------------------

Features

Key Features	Industrial Grade, Cast Metal Construction, Heat Dissipation Fins, Flywheel Included
--------------	---
