

Bathtub Water Circulation Pump

This bathtub pump is designed for efficient water circulation and quiet operation. It features durable, corrosion-resistant materials ensuring an extended lifespan and reliable water flow for a relaxing bathing experience.

Product Overview

High-Performance Circulation

This single-stage centrifugal pump is engineered specifically for reliable bathtub water circulation. Constructed with corrosion-resistant materials like polypropylene and stainless steel, it ensures a long operational lifespan. The unit features a robust asynchronous motor with built-in thermal protection, providing consistent and quiet performance for demanding bathing environments.

Technical Specifications

Protection Class

IP55

Pump Type	Single-stage centrifugal
Motor Type	Asynchronous, two poles
Insulation Class	Class F
Operation Mode	Continuous operation
Power Supply	Single phase

Construction Materials

Component Materials

Component	Material
Suction/Discharge Mountings	Polypropylene
Motor Shaft	S/S AISI 420
Impeller	PPO
Mechanical Seal	Graphite and Ceramic
Motor Housing	Aluminum

Features

Key Features

- Complete drainage device
- Built-in thermal protection
- Corrosion-resistant construction
- Designed for quiet operation
