

Beam Pumping Unit

This is a beam pumping unit. It utilizes a beam and crank mechanism to drive a downhole pump.

Product Overview

High-Quality Beam Pumping Unit

This beam pumping unit is engineered to provide reliable performance in oil extraction operations. Constructed with high-quality materials, it ensures durability and efficiency for long-term field use. The unit is designed to meet the rigorous demands of professional industrial environments.

Key Features

Quality Grade

Good Quality

Technical Design

Ventilation Features

- Multi-speed fan for effective ventilation
- Smoke, grease, and odor capture
- Integrated surface lighting
- Removable filters for easy maintenance

Construction

Stainless steel components with a brushed finish

Installation

Mounting Configuration

Wall-mounted design for placement above cooktops or ranges
