

Bearing Unit UK200

The UK200 is a bearing unit designed for machinery and industrial applications. It features a robust construction and is suitable for various operating conditions.

Overview

Industrial Bearing Unit UK200

The UK200 is a high-performance bearing unit specifically engineered for demanding machinery and industrial applications. It features a robust construction designed to ensure reliable performance across a variety of operating conditions. The unit is optimized for secure shaft mounting via an integrated locking collar and is designed for ease of installation in complex environments.

Technical Specifications

Dimensional Parameters

- Overall Length (L)
- Bearing Width (Be)
- Inner Diameter (d1)
- Outer Diameter (D)
- Total Height (V)
- Bearing Thickness (T)
- Base Width (BI)

Design Features

Locking Collar, Industrial Grade, Robust Construction
