

Benchtop Grinding Machine

This benchtop grinding machine is a stationary power tool ideal for grinding, polishing, and buffing. It utilizes two abrasive wheels with different grits, mounted on a motor-driven shaft, for shaping metal and sharpening tools.

Overview

Professional Benchtop Grinding Machine

This versatile benchtop grinding machine is designed for precision grinding, polishing, and buffing applications in workshops and metalworking environments. It features a robust motor and is compatible with various wheel sizes to accommodate different sharpening and shaping tasks. Equipped with a dust-protected switch for enhanced durability, this tool is an essential addition for any professional maintenance or fabrication setup.
