

# Benchtop Wood Jointer with Open Stand

This benchtop jointer is a woodworking machine used to create flat surfaces along the length of a board. It features adjustable infeed and outfeed tables and is mounted on an open stand for stability.

## Overview

### Precision Woodworking Performance

This 6-inch benchtop jointer is designed to deliver professional-grade flatness and precision for woodworking projects. Featuring a robust 1,100W motor and a three-knife cutter block, it ensures efficient material removal and smooth surface finishes. With an adjustable fence and stable open stand, this machine provides the versatility and reliability needed for both small workshops and demanding tasks.
