

Benzene Distillation Characteristics Tester

This tester determines distillation characteristics of benzene. It is designed according to the National Standard GB/T3146.

Product Overview

Precision Distillation Testing

The Benzene Products Distillation Tester is a specialized instrument engineered for the precise determination of distillation characteristics in benzene and related aromatic products. Designed for rigorous quality control and research environments, this apparatus ensures highly accurate and repeatable results. It features advanced temperature control, efficient cooling systems, and integrated safety mechanisms to facilitate reliable operation in petrochemical industry applications.

Technical Specifications

Key Components

- Heating mantle with precise temperature control
- Distillation flask
- Condenser with efficient cooling system
- Receiving cylinder for volume measurement

Safety Compliance

Integrated Safety Systems • Accident Prevention Design

Primary Application

Petrochemical, Quality Control, Research & Development
