

Bevel Gear for Intersecting Axes

This bevel gear is designed for transmission between intersecting axes. It offers a high bearing capacity for demanding applications.

Product Overview

High-Performance Angular Transmission

This bevel gear is expertly engineered for efficient power transmission between intersecting axes. Designed with a high bearing capacity, it ensures reliable performance in demanding mechanical systems. Its robust construction makes it an ideal solution for applications requiring precise angular motion and durability.

Technical Specifications

Application	Transmission between intersecting axes
Bearing Capacity	High Bearing Capacity
Configuration	Cone-shaped
