

# Bevel Gear Set for Power Transmission

This bevel gear set is designed for efficient power transmission in industrial applications. The gears are manufactured from high-strength alloy steel, ensuring durability and wear resistance.

## ADDITIONAL IMAGES

## Product Overview

### Precision Bevel Gear Solution

This precision-engineered bevel gear set is designed for high-performance power transmission applications, facilitating the efficient transfer of motion between non-parallel shafts. Featuring a conical shape with optimized tooth geometry, these gears ensure smooth, quiet operation while minimizing vibration. Manufactured from high-strength alloy steel with rigorous heat treatment, they are built for exceptional durability and wear resistance in demanding industrial, automotive, and aerospace environments.

## Technical Details

### Design Features

- Conical shape
- Angled teeth geometry
- Heat-treated for wear resistance
- Optimized for noise reduction

### Customization

Custom Sizes, Drawing-Based Production, Sample-Based Production

### Material

High-strength alloy steel

## Applications

### Suitable Industries

Industrial Machinery • Automotive Systems • Aerospace
