

Bicycle Cassette Sprocket Set

This bicycle cassette transfers power from the pedals to the rear wheel. It consists of multiple sprockets, allowing riders to adjust the gear ratio.

Product Overview

Precision Engineered Drivetrain Component

This bicycle cassette sprocket set serves as a critical component in the drivetrain system, designed to efficiently transmit power from the pedals to the rear wheel. Featuring a multi-sprocket design, it provides versatile gear ratios suitable for varied terrains and riding conditions. The assembly includes essential lockrings for secure installation on the rear wheel freehub body, ensuring stability and consistent performance.

Technical Specifications

Component Type	Bicycle Cassette
Lockring Tightening Torque	40 N.m
Construction Features	Precision Engineered, Drivetrain Optimized, Lockring Included

Performance Metrics

Performance Benefits

- Enhanced gear adjustment for varied terrains
- Smooth and reliable shifting performance
- Optimized power transmission
