

Bicycle Cassette with Lockring

High-quality bicycle cassette designed for smooth and efficient gear changes. It features a durable construction and precise tooth profiling for optimal performance and includes a lockring for secure installation.

Overview

High-Performance Drivetrain Component

This bicycle cassette is precision-engineered to provide smooth and efficient gear transitions for professional and recreational drivetrains. Built with a focus on durability and performance, the unit features advanced tooth profiling to ensure reliable power transfer. The package includes a standardized lockring, facilitating a secure and straightforward installation process for maintenance technicians and bike mechanics.

Technical Specifications

Model Identifier	SR-527
Lockring Tightening Torque	40 N-m
Compatibility	Multi-speed Drivetrains, Standard Bicycle Hubs

Key Features

Performance Attributes

- Optimized tooth profiling for shifting accuracy
- Durable metallic construction
- Secure lockring fastening system
- Efficient energy transmission
