

Bicycle Front Derailleur

This bicycle front derailleur is a component of the drivetrain, responsible for shifting the chain between the chainrings. It features a metal cage that guides the chain, a mounting clamp for attachment to the bicycle frame, and a cable attachment mechanism for actuation.

Product Overview

Precision Drivetrain Component

This bicycle front derailleur is engineered to provide smooth and reliable gear shifting performance. Designed as a critical component of the drivetrain, it efficiently guides the chain between chainrings to ensure optimal power transfer. Its robust construction features a durable metal cage and a secure mounting clamp, making it a dependable choice for bicycle maintenance and upgrades.

Technical Specifications

Component Type	Front Derailleur
Material	Metal
Mounting Mechanism	Clamp-on
Key Features	Smooth Shifting, Reliable Performance, Metal Cage, Cable Actuation
