

Bicycle Mudguard Forming Machine

This forming machine is designed for manufacturing bicycle mudguards. It utilizes a series of forming stations with precision tooling and a synchronized gear drive for consistent production.

Product Overview

Industrial Bicycle Mudguard Production

The ZN01 is a specialized forming machine designed specifically for the high-volume production of bicycle dirt-block off plates. It features a series of progressive forming stations equipped with precision tooling to ensure consistent, high-quality metal shaping. Built on a heavy-duty base, the machine minimizes vibration to maintain stability during operation.

Technical Specifications

Drive System	Gear drive
Forming Process	Progressive multi-station shaping

Key Features

Design Features	Heavy-duty base, Synchronized operation, High-volume capacity, Precision tooling
