

Bicycle Rear Derailleur

This is a rear derailleur designed for bicycle drivetrains, facilitating gear changes. It features a parallelogram design and a cage to hold jockey wheels.

Overview

Precision Shifting Performance

This rear derailleur is a critical component of the bicycle drivetrain, engineered to provide smooth and reliable gear shifting. Featuring a durable parallelogram design, it ensures precise chain movement across the cassette. The unit includes adjustable jockey wheels and fine-tuning screws, allowing for optimal performance customization and ease of maintenance for professional assembly or repair.

Technical Specifications

Adjustment Features

- Fine-tuning limit screws
- Cable tension adjustment
- Jockey wheel alignment

Design Type	Parallelogram
Function	Drivetrain gear shifting
Material	Metal

Installation

Mounting	Frame-mounted
Interface	Cable-actuated
