

Bicycle Rear Derailleur

This rear derailleur shifts gears on a bicycle. It moves the chain between different sprockets on the cassette.

Product Overview

Precision Shifting Performance

This bicycle rear derailleur is engineered to provide smooth and reliable gear shifting by accurately guiding the chain across the cassette sprockets. Featuring a robust cage design with dual jockey wheels, it ensures optimal chain tension and performance throughout your ride. Designed for standard mounting via a derailleur hanger, this component combines durable metal and plastic materials to balance weight and longevity.
