

# Binocular Microscope

This binocular microscope is designed for detailed observation of microscopic specimens. It features adjustable eyepieces, multiple objective lenses, a mechanical stage, and substage illumination for detailed analysis.

## Overview

### Professional Binocular Microscope

This binocular microscope is engineered for high-precision observation of microscopic specimens, making it an essential tool for scientific research and laboratory analysis. It features adjustable eyepieces and a revolving nosepiece with multiple objective lenses to provide a versatile range of magnification levels. Equipped with a mechanical stage for precise slide manipulation and advanced substage illumination, this instrument ensures clarity and ease of use for demanding professional applications.

## Optical System

Viewing Head	Binocular
Nosepiece	Revolving

## Mechanical Features

Stage Type	Mechanical
Stage Functionality	Precise slide manipulation

## Illumination

Illumination System	Substage illumination
Control Features	Condenser, Diaphragm Control

## Applications

### Primary Applications

Scientific Research • Laboratory Analysis • Microscopic Observation
