Product Overview

Advanced Biometric Authentication Terminal

The GW1000R is a comprehensive identity verification and data management solution designed for secure and efficient operations. Featuring a dual-screen capacitive and electromagnetic touch interface, it supports advanced functions like facial recognition, fingerprint scanning, and document identification. This versatile terminal is ideal for access control, identity verification, and data collection across various professional industries.

Hardware & Display

Display Configuration	Dual-screen (Capacitive touch + Electromagnetic screen)
Operating System	Android

Biometrics & Security

Document & Identity Verification

- Document shooting
- ID card reading
- Passport identification
- Hong Kong and Macau pass identification
- Social security ID card reading

Biometric Authentication	Face ID, Binocular Living Recognition, Fingerprint Identification
--------------------------	---

Connectivity & Peripherals

Card Reading Options

- ID Card
- Magnetic stripe card
- SIM card

Optional Modules

4G Module

Data & Connectivity

QR Code Scanning, Barcode Printing, USB Interface, Network Interface
