

Blast Furnace Gas Water Treatment System

Integrated system for treating water contaminated with blast furnace gas. This system efficiently removes pollutants and contaminants from water used in blast furnace operations, ensuring environmental compliance and enabling water reuse.

Overview

Blast Furnace Gas Water Treatment System

This integrated system is specifically designed for treating water contaminated with blast furnace gas, facilitating efficient pollutant removal and ensuring strict environmental compliance. By utilizing advanced filtration, chemical treatment, and separation processes, it enables effective water reuse in industrial operations. Engineered for high-volume applications, the system provides robust performance and reliable operation for demanding steel manufacturing environments.

Technical Specifications

Treatment Capacity

2560 cbm

Capacity

Core Processes

- Advanced Filtration
- Chemical Treatment
- Separation Processes

Compliance & Usage

Environmental Compliance

Pollutant Removal • Environmental Compliance

Primary Applications

Blast Furnace Operations, Industrial Water Treatment, Water Reuse
