

Blind Rivet Fastener for Motorcycle Parts

A blind rivet, also known as a pop rivet, joins materials together using a rivet body and setting mandrel. When a special tool pulls the mandrel, the rivet body expands, creating a secure joint before the mandrel snaps off.

Product Overview

High-Performance Blind Rivet

This blind rivet, commonly referred to as a pop rivet, is a specialized fastener engineered for joining two or more materials securely. It features a robust rivet body paired with a setting mandrel, designed to create tight, durable joints in motorcycle assembly and repair. Once installed with a standard setting tool, the mandrel snaps off to leave a clean, flush finish on the material surface.

Technical Specifications

Fastener Type	Blind Rivet (Pop Rivet)
Installation Method	Mechanical Expansion, Mandrel Pull, Flush Finish

Application

Primary Application	Motorcycle parts assembly and structural fastening
